# BLACKMORES WINDMILL STUFFING BOX

A windmill stuffing box is an alternative to a traditional compensator and allows a windmill to deliver water above the conventional outlet in the windmill column or to enable water to be pumped down pipelines.

The Blackmores Windmill Stuffing Box is fitted to the top of the mill column, contains no moving parts and is easily installed and maintained.

The 1½” (40mm) threaded stuffing box body is manufactured from brass and is supplied with a 5/8” stainless steel rod. The body holds three (3) water lubricated packing glands and a rubber seal; the rubber components are available as a service kit and are easy to replace.

For more information or to arrange shipment please contact Blackmores Power and Water.

## Ordering Details

Part Number	Description
BSB	Windmill Stuffing Box – Complete
WSBSK	Windmill Stuffing Box Seal Kit Includes: 3 x Packing Glands and 1 x Rubber Seal
